Test Type

white box

Client

fleetdm

Engagement Summary

On 05 June 2026, Aikido conducted a white box web application penetration test for fleetdm focused on the application(s) within the defined scope and their exposure to targeted attacks. The primary goal of this engagement was to proactively discover vulnerabilities within those scoped applications that could lead to compromise or exposure of sensitive information.

The penetration test simulated real-world attack techniques across applicable attack surfaces, including authentication, authorization, input handling, business logic, and where relevant, agentic and API-specific behaviors, to identify risks within the scoped application(s). The configured scope was limited to the following domains and associated endpoints:

Scope

<https://redteam.cloud.fleetdm.com>

Remaining Risk

All identified findings have been remediated. The environment demonstrates a strong security posture, with continued monitoring recommended to maintain this level of protection.

Detailed findings and remediation evidence are documented in the full penetration test report.

Current Status

Avg. Resolution Time

72.2 days

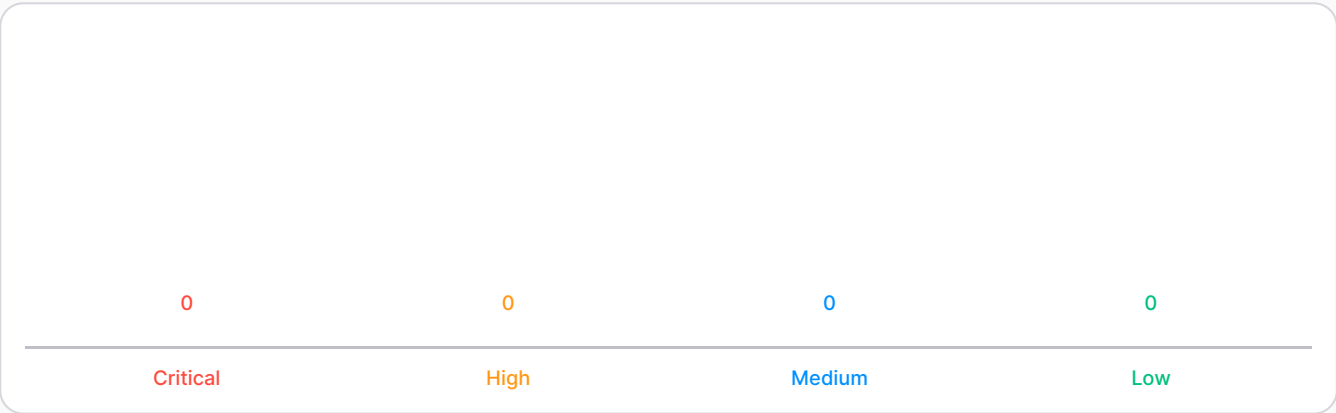

Highest Severity

None

Unresolved Issues

0

Open Issues by Severity

Risk Posture

Rating Scale

A Excellent
Exceeding best practices

B Good
Meeting industry standards

C Fair
Moderate improvements needed

D Poor
Significant attack surface

F Critical
Immediate remediation required

After Remediation

Security posture for this scope aligns with strong baseline expectations.
